PROFESSIONAL SUMMARY

Senior DevOps Engineer with 12+ years of experience in Azure, AWS, Kubernetes, Terraform, GitOps, and SRE practices, driving high availability, cost optimization, faster delivery, and reduced operational risk across large-scale production environments.

TECHNICAL SKILLS

TECHNOLOGIES: Solutions Engineering, IAAS, System Desing, Problem Solving, DevOps, DevSecOps, DSA, IaC.

TOOLS: Kubernetes, AWS, Azure, Docker, Terraform, GitLab CI, Jenkins, GitHub, Linux, AKS, EKS, NKP, VKS, ArgoCD, Helm, Trivy, Prometheus, Grafana, Loki, Alloy, Calico, Cilium, Hubble, Ansible, MySQL, PostgreSQL, DNS, Linked Lists, Arrays, Hash Tables, Trees, Graphs.

PROGRAMMING LANGUAGES: Python, C++, JAVA, HCL, BASH, PowerShell, YAML, JSON, KQL

TRAINING AND CERTIFICATIONS: AZ-104(Microsoft), AZ-204(Koenig), AZ-305(Koenig), AZ-400(Koenig), AZ-700(Koenig), AWS-SAA-C02(Amazon), AWS-SAP(Koenig), AWS-Advanced Networking Specialty(Koenig), CKAD(KodeKloud), CKA(KodeKloud), CKS(KodeKloud), ITIL v4 (Koenig).

EXPERIENCE

PHOENIX CONTACT INDIA

October 2022 - Present

SENIOR DEVOPS ENGINEER (PLATFORM SERVICES)

- Led a team of 7 engineers, resulting in a 30% increase in team productivity through the implementation of Agile methodologies and automation tools.
- Improved platform availability for production systems/applications to over 99.9% by stabilizing and standardizing hybrid infrastructure, while eliminating ad-hoc configurations and single-cloud dependencies.
- Accelerated cloud environment deployments ~70-80% by introducing end-to-end Terraform (IaC) based infrastructure deployment standardization across DEV/TEST/PROD environments.
- Reduced configuration-related incidents by 30% through governed Azure Landing Zones and AWS multi-account architecture with enforced IAM, SCPs, and compliance guardrails.
- Achieved consistent configuration and release governance across 50+ Kubernetes clusters, eliminating manual drift and environment discrepancies via centralized GitOps. Using tools ArgoCD, Helm, Keycloak.
- Eliminated visibility gaps in Docker containers supply-chain security and achieved comprehensive coverage of vulnerabilities and SBOMs for container images and internal software releases by using Trivy and Dependency Track.
- Reduced incidents MTTR by ~40% and Optimized costs up to 30by enabling proactive observability and rapid root-cause analysis with Prometheus, Grafana, Loki, Alloy, ELK Stack and Cilium Hubble.
- Prevented data loss for critical workloads by implementing automated, repeatable Kubernetes and Cloud Platforms backup and restore strategies. By Utilizing tools like: Azure Backup, AWS Backup, and Velero.
- Implemented standardized, reusable GitLab CI/CD pipelines with integrated security gates, achieving increased deployment frequency without sacrificing operational stability.
- Implemented SRE principles and ITSM alignment, achieving improved operational predictability and strict SLA/SLO compliance through automated incident and change management workflows. Using tools like: JIRA, Matrix42.

DYNACONS SYSTEMS AND SOLUTIONS LIMITED

November 2018 - October 2022

CLOUD SOLUTIONS ARCHITECT

- Architected and operated AWS and Azure cloud platforms, achieving 99.9%+ availability for production workloads while supporting scalable and secure public-cloud operations.
- Designed modular cloud architectures and standardized IaC using Terraform, reducing environment provisioning time by ~60% and eliminating most configuration drift across environments.
- Operated and stabilized Kubernetes platforms (EKS & AKS), improving cluster reliability and recovery time during upgrades and failures by ~40%.
- Adopted GitOps and CI/CD automation (ArgoCD + pipelines), increasing deployment frequency while reducing deployment-related incidents by ~50%.
- Strengthened cloud and container security posture using IAM governance, network policies, and AWS and Azure Native security tooling, and Qualys achieving full visibility into vulnerabilities and reduced security risk exposure.
- Migrated on-prem workloads to AWS and Azure (rehost & refactor), enabling successful workload modernization and reduced infrastructure management overhead.
- Improved service stability and SLA/SLO adherence by collaborating cross-functionally and operating within ITSM processes using ServiceNow, resulting in faster incident resolution and controlled change management.

SAGE INFOTECH PVT LTD

April 2014 – May 2015

CLOUD ENGINEER 1

- Owned production incident management using BMC Remedy and hands-on troubleshooting, resulting in faster incident resolution, minimal downtime, and improved service continuity.
- Automated AWS infrastructure lifecycle using CloudFormation, achieving consistent provisioning/deprovisioning and reduced manual errors across environments.
- Operated and stabilized AWS compute and networking (EC2, VPC, ELB, Security Groups, Elastic IP, Route53), improving application availability, secure traffic routing, and fault tolerance in production.
- Designed resilient backup and recovery mechanisms using AMIs, EBS snapshots, and S3, enabling reliable data protection and faster recovery during instance or data failures.
- Monitored and maintained AWS storage and instance health (EBS, S3, EC2), ensuring data durability, performance stability, and operational reliability.

SYNERGY INFONET PVT LTD

June 2013 – April 2014

LINUX SYSTEM ADMINISTRATOR

- Administered Linux and Windows production systems, sustaining 99.9%+ uptime while reducing OS incidents by ~40% through proactive troubleshooting.
- Hardened and secured OS and network layers, cutting critical vulnerabilities and audit findings by ~50% via patching, AD, and GPOs.

EDUCATION

National Institute of Management Solutions

2015 - 2018

Bachelor of Computer Applications in Information Technology

Central Board of Secondary Education

Senior Secondary in Economics

2010 - 2011

Central Board of Secondary Education

Secondary in Mathematics

2008 - 2009

PROJECTS

ENTERPRISE INFRASTRUCTURE AUTOMATION PLATFORM

JAN 2023 – Nov 2023

ORGANIZATION: PHOENIX CONTACT INDIA

SENIOR DEVOPS ENGINEER | Stack: Ansible, Rundeck, GitLab CI

- **Problem:** Fragmented IT operations across Windows, Linux, Virtualization, and Network teams led to significant manual overhead, inconsistent patching, and slow resource provisioning.
- **Action:** Planned and built an end-to-end automation workflow using Rundeck and custom Ansible roles. This provided a self-service portal for Linux, Windows, NOC, and VMWare teams to execute day-to-day tasks effortlessly through standardized, automated templates.
- **Impacts:**
 1. **Outcome:** The solution significantly increased operational capacity without adding headcount.
 2. **Efficiency:** Achieved an average 70%–80% reduction in task execution time and up to 20% savings in overall infrastructure costs by enhancing reliability and resource monitoring.
 3. **Strategic Value:** Replacing hours of manual work with instant, "push-button" execution allowed the team to do more with less, shifting focus from maintenance to high-value projects.

GITOPS MULTI-CLUSTER KUBERNETES PLATFORM

FEB 2024 – May 2024

ORGANIZATION: PHOENIX CONTACT INDIA

SENIOR DEVOPS ENGINEER | Stack: GitLab CI, ArgoCD, Keycloak, Helm, Terraform

Problem: Managing 50+ Kubernetes clusters led to high operational overhead (manual effort), configuration drift, and increased risk of deployment failures and downtime.

Action: Architected GitOps (ArgoCD + GitLab CI) with standardized Helm charts and Keycloak-based RBAC; implemented Blue-Green deployments for controlled releases.

Impact:

- 1 Reduced manual effort by ~70% and improved deployment consistency across clusters.
- 2 Achieved zero-downtime releases and reduced deployment failures by ~50%.
- 3 Improved deployment speed (2–3x) and strengthened security and governance.

ON-PREM TO AWS CLOUD MIGRATION

AUG 2021 – Dec 2021

ORGANIZATION: DYNACONS SYSTEMS AND SOLUTIONS LIMITED

CLOUD ARCHITECT | Stack: AWS, VPC, Solution Engineering, RDS, S3

- **Problem:** Legacy on-prem infrastructure (OEM support expired) created high failure risk, limited scalability, and increased downtime exposure for critical applications.
- **Actoins:**
 - Architected and executed migration to AWS (rehost + partial replatform) using EC2, EBS, and S3, with VPC-based network design.
 - Designed High Availability architecture across multi-AZ, implemented Auto Scaling Groups + Elastic Load Balancer for dynamic scaling and resilience.
 - Established Disaster Recovery (DR) with cross-region backups / replication and defined RTO/RPO targets.
 - Optimized costs using right-sizing, Reserved Instances/Savings Plans, and storage tiering (S3 lifecycle policies).
- **Impact:**
 - Achieved 99.9%+ availability with fault-tolerant architecture across AZs.
 - Reduced infrastructure and maintenance overhead by ~50–60%.
 - Improved scalability (auto-scale vs fixed capacity) and reduced downtime risk significantly.
 - Lowered cloud spend by ~20–30% through cost optimization strategies.
